

# GOSHEN HOSPITALISTS AND INTENSIVISTS

While you are in the hospital, hospitalists ensure you receive superior care. These physicians and nurse practitioners are specialists in internal medicine and care only for hospitalized patients. Our hospitalists do not have medical practices outside the hospital. This enables them to focus exclusively on you and your care while you are in the hospital.

You can expect to see your hospitalist at least once a day. You and your family can rely on your hospitalist to keep you informed of tests, their results, overall progress of your treatment and your anticipated discharge date and time.

Your hospitalist also works closely with your primary care doctor to understand your needs, as well as your past medical history. When you are discharged from the hospital, your primary care doctor receives a complete summary of your hospitalization. This strong partnership between your physicians ensures a smooth transition of your care from the hospital to your doctor.
