

Parathyroid Scan – A Nuclear Medicine Exam of Your Parathyroid Gland

You have been scheduled for a Parathyroid Scan, which involves the use of a small amount of radioactive material. The level of radioactivity used is extremely low and has no side effects.

You will be positioned next to a special detector called a Gamma Camera. The camera does not produce any radiation. It will be placed close to your neck during the test.

Patient Information:

1. Please report to *Goshen Hospital* **15 minutes** prior to your scheduled test time. This time is to allow for the registration process. Please bring your insurance cards.
2. After you are registered, a Nuclear Medicine Technologist will obtain your pertinent medical history, and you will receive an injection of a small amount of a radioactive material through a vein in your arm or hand. There is no side effect or allergic reaction to this injection.
3. This material will circulate in your bloodstream for approximately 20 minutes, after which time you will be positioned flat on your back on an imaging table. A camera will be placed close to your neck and chest.
4. You will be asked to lie very still while the camera obtains the images.
5. You will then be released and asked to return to the Nuclear Medicine Department 2 hours post injection (*you will be given a time by the technologist*).
6. When you return, similar images will be taken of your parathyroid glands.
7. The attending Radiologist will review your pictures before you leave the department. Sometimes, additional views or x-rays are necessary to complete your test.

Patient Preparation:

- None
- Let the Technologist Know:**
For the success of the scan and for your safety, tell the technologist if you:
- Are currently taking Synthroid, or any other thyroid medication.
 - Have had a Parathyroid Scan *before (or other tests pertaining to your symptoms, like a CAT Scan or Ultrasound)*.
 - Have had any previous Parathyroid problems.
 - Have had any neck surgeries.
 - Are pregnant or breastfeeding (*or if there is any chance of pregnancy*).

You may be asked about your overall health to aid in assessing your images.

For Best Results:
Relax and remain as still as you can. This will help ensure that the images taken will be clear and will not have to be repeated.

- Scan Tips:**
- Prepare for the test as instructed.
 - Ask how long the test will take.
 - Bring something you can do while waiting to have your scan.
 - Be ready to talk about your health and any allergies you may *have (it may be helpful to write down surgery dates, medications, etc.)*.

My Appointment:

Date: _____

Time: _____

Place: ***Goshen Hospital***
200 High Park Ave.
Goshen, Indiana 46526
574-364-2605

IF YOU ARE UNABLE TO KEEP THIS APPOINTMENT, PLEASE CONTACT THE NUCLEAR MEDICINE DEPARTMENT AT LEAST 24 HOURS IN ADVANCE OF YOUR APPOINTMENT AT 574-364-2605.

Notes:

After Your Scan:

After your test, you may return to your normal routine. The tracer will leave your body within a few days. To hasten this process, drink extra water and urinate frequently for 24 hours after your scan. Your referring physician will receive a written report from the Parathyroid Scan 24-48 hours after your test is complete.

What is Nuclear Medicine?

Nuclear Medicine is a medical specialty which uses safe, painless and cost-effective techniques both to image the body and treat disease. Nuclear Medicine imaging is unique in that it documents organ function and structure in contrast to Diagnostic Radiology which is based on anatomy. Nuclear Medicine allows your physician to gather medical information which may otherwise be unavailable, require surgery, or necessitate more expensive diagnostic tests.

Nuclear Medicine uses very small amounts of radioactive materials or radiopharmaceuticals to diagnose and treat disease.

Radiopharmaceuticals are substances that are attracted to specific organs, bones or tissues. The radiopharmaceuticals used in Nuclear Medicine emit gamma rays which can be detected externally by special types of cameras called Gamma Cameras. These cameras work in conjunction with computers and are used to create images which provide data and information about the area of the body being imaged.

PARATHYROID SCAN

What is a Parathyroid Scan?

A Parathyroid Scan is a special imaging test. It is used to find parathyroid abnormalities. A Parathyroid Scan uses an injected radioactive matter (tracer) and a camera to form an image. It is a type of Nuclear Medicine Scan. Your doctor has decided that the value of this test outweighs any risk.
